

Patuxent Science Meeting 2004 Poster Abstract

Wood Duck Nest Box Monitoring System

B.H. Powell, Edward J. (Jerry) McFaul*, James R Kelley, Jr., and Joe Fuller

Over 10 years ago the Wood Duck Nest Box System was developed by Powell and Kelley utilizing dBASE, a 16-bit DOS application. Over the years this application has remained functional but difficult to use in the windows environment. FileMaker has provided the means to convert this application into a powerful Windows and Mac based relational database.
